Analyzing Author Research Impact with Google Scholar

How do I calculate metrics for my publications in Google Scholar?

Author metrics are only available in Google Scholar (http://scholar.google.com) if the author has created a profile. Those authors with profiles have an underlined (hyperlinked) name in the results list.

Metrics available are the $h$-index, the i10-index (the number of publications with at least 10 citations), and number of citations by year. To create a profile, click on the “My Citations” link, which appears on most Google Scholar screens.
